

JP Quick Anti-Cant Detachable Level

Parts Included:

- Detachable level
- Weaver base clamp unit
(thumbnut, crossbolt, clamp pouch)

Installation Instructions

CAUTION: REMOVE MAGAZINE AND VISUALLY CHECK CHAMBER TO MAKE SURE THAT FIREARM IS UNLOADED.

The JP detachable level can be used in combination with our detachable front sight by attaching it behind the sight. It will be just visible through the rear aperture. A quick check will verify that the gun is not canted before firing a string. It may also be used on a scoped rifle and attached to any "Weaver" type rail feature.

If you are not already using them, check out our high quality detachable sight system for use on A-3 uppers and our gas block or front sight mounting block or any "Weaver" type rail system. They offer quarter minute adjustment, interchangeable apertures and return to zero when removed and reinstalled.

THANKS FOR YOUR BUSINESS!
