

WEIGHT KIT FOR MK III HAND GUARDS

PARTS INCLUDED

- Two (2) hand guard weights
- Four (4) 10-32 flat socket cap screws
- Two (2) two-hole backer plate (JPHG-W only)

CAUTION: REMOVE MAGAZINE AND VISUALLY CHECK CHAMBER TO MAKE SURE THAT FIREARM IS UNLOADED.

JP Hand Guard Weights are designed to attach at any position to our JP MK III or previous generation hand guard tubes. They can be used to provide a rail interface on many other free float tubes. One or several of these weights can be mounted to adjust the balance of your rifle as you see fit. Use the instructions below depending on your hand guard tube style, and tighten to 32 in-lbs.

SIGNATURE SERIES

For use on the slotted Signature hand guard tubes, place the backer plate in the desired slot on the inside of the tube. Orient the hand guard weight over the top, and use the included screws to tighten the to together. It may help to use a small hex key or knife blade inserted though the adjacent slots in the tube to keep the backer plate in place while you inert the screws.

RAPID CONFIGURATION SERIES

For attachment on Rapid Configuration tubes, attach the weight directly to the tube using the supplied 10-32 flat head screws.

THANKS FOR YOUR BUSINESS!
